

SupremeDAO

SupremeDAO is revolutionizing DeFi with KAI, a reserve asset resilient to extreme market volatility

KAI has unlimited upside and limited downside

Recent black swan events have shown that stablecoins are no longer a risk-off strategy. And while decentralized stables like RAI or LUSD offer some protection, they offer no upside potential.

Enter **KAI**, the supreme reserve asset with limited price movement during extreme market conditions.

Bonding Curve

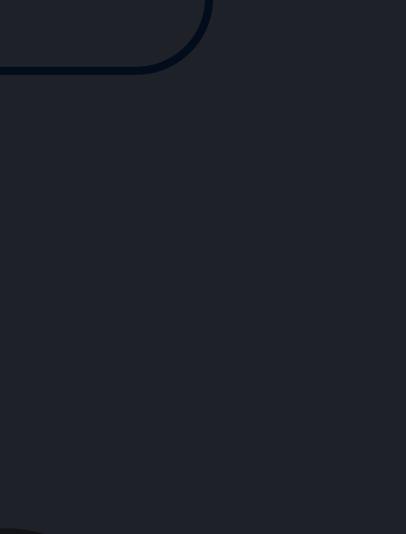

The pricing mechanism that adjusts based on demand when minting KAI, correlating with the value of the Basket of Assets.

Basket of Assets

Multi-collateral backing diversifies reserves and distributes risk across different asset types.

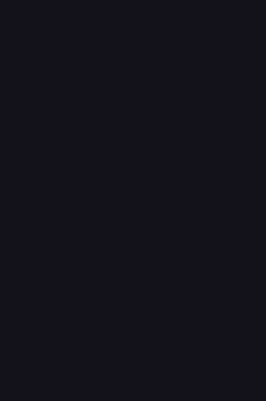

Strategies

Autonomous agents that can stake, trade, and maintain the collateral ratio for Basket value. Decided by SupremeDAO.

Simply hold KAI to earn rates of return.

No staking or locking required, SupremeDAO does the work for you.

User deposits stablecoins to mint KAI.

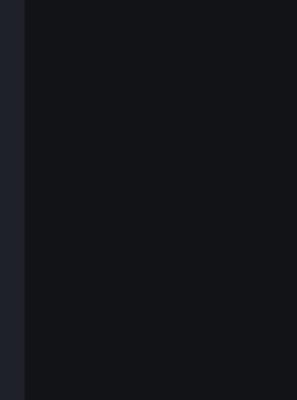

130 LUSD

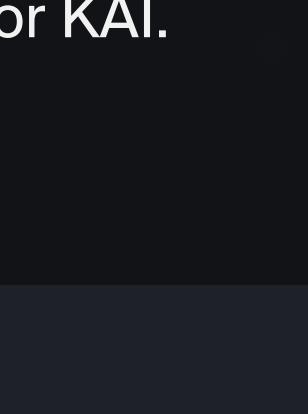

43 RAI

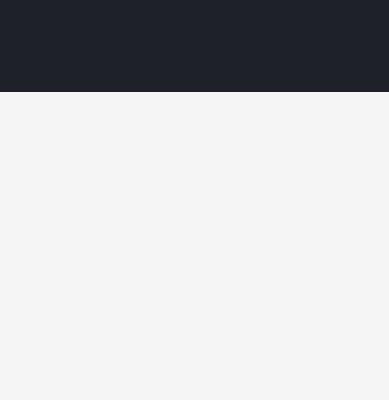

130 DAI

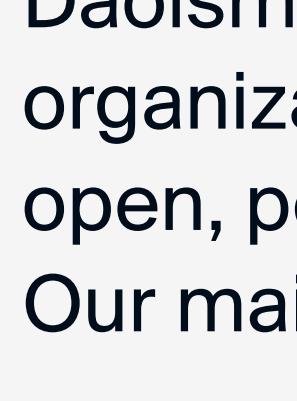

A portion of stablecoins remains in the curve for exit liquidity, acting as partial collateral for KAI. The rest is allocated to Strategies.

SupremeDAO selects Strategies that maintain the most effective Basket of Assets composition.

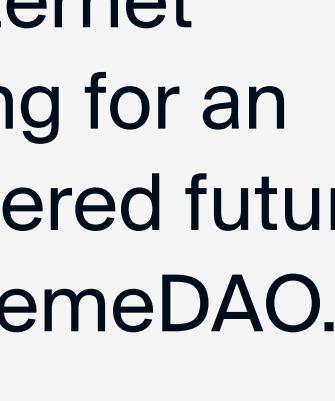

The Basket of Assets securely stores assets acquired by Strategies which serve as partial collateral for KAI.

Arseny is a software engineer, entrepreneur, investor building in web3 since 2017. Previously, he has worked on Ocean Protocol and API3 DAO, PrimeDAO, and was a founding member of Curve Labs. Currently, he is the co-founder and CEO of Daoism Systems.

Arseneeth

Ilja is a serial entrepreneur with a background in finance and business development. He has founded several tech startups at the cutting edge of innovation. In 2021, he joined web3 as the co-founder, COO, and CFO of Daoism Systems.
